

Wanted! Participants for a group discussion or interview!

Why this study?

We want to find out what topics are most important and what problems are experienced by people with (rare) neurological, neurometabolic and neuromuscular disorders, so that we can measure this properly with questionnaires in the future.

Benefits: Joining helps us understand what you find important to discuss with the doctor and what to measure when conducting research in these specific diseases. This can help other patients in the future.

Who can join?

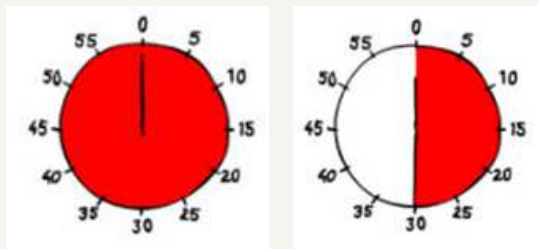

-People with (rare) neurological, neurometabolic or neuromuscular disorders who are 8 years or older.

-If participants are under 8 years old or unable to participate due to cognitive limitations, we are happy to invite parents to participate in the group discussion or interview.

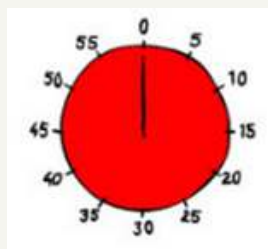

Good to know!

We will talk one time in a group of about 3 to 6 people.

The group interview lasts up to 60 to 90 minutes and will be online via computer.

If you prefer a one on one interview with the researcher, please let us know. This will take up to 60 minutes and will be online via computer.

Want to join or have any questions?

Please contact: t.h.g.steenbergen@amsterdamumc.nl
